Resursi RTU Zinātniskajā bibliotēkā

## **Mākslīgais intelekts**

Terminu “mākslīgais intelekts” (MI) 1956. gadā ieviesis Džons Makārtijs (John McCarthy).

MI ir datorzinātnes apakšnozare, kas nodarbojas ar intelektuālas uzvedības automatizāciju. MI definē arī kā pētījumus, kā likt datoriem darīt lietas, ko pašlaik cilvēki dara labāk, vai kā skaitļošanas procesu pētījumus, kas ļauj uztvert, spriest un darboties.

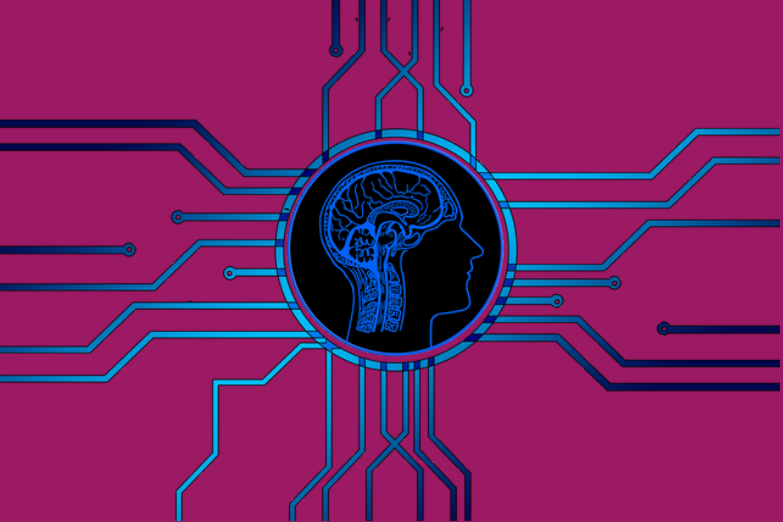

***Nacionālā enciklopēdija***

## Artificial intelligence

The capacity of computers or other machines to exhibit or simulate intelligent behaviour; the field of study concerned with this. In later use also: software used to perform tasks or produce output previously thought to require human intelligence, esp. by using machine learning to extrapolate from large collections of data.
